CLEAN COMPUTING

Clean software protects your data!

Back Up Data
Devices can be replaced; data may be irreplaceable. Back up data to an external drive or the cloud on a regular basis.

Clean Up Your Digital Workspace
Delete unnecessary shortcuts from your computer's desktop.

Get Organized
Categorize your files into folders and delete duplicated items, outdated programs, or unnecessary files .

Protect Against Malware
Internet security software helps ensure viruses and malware don't wreak havoc on your information or steal your identity.

Update Software, Delete Old Apps
Outdated software is vulnerable to malware. Delete outdated and unused software for a more secure system.

Update Your Passwords
Regularly update your passwords across all accounts and devices. Utilize complex passwords, a password manager, and two-factor authentication.
